نموذج مسابقة (يراعي تُعليق الاروس والتوصيف المعدّل للعام الاراسي 2016-2017 وحتى صدور المناهج (المطوّرة)
This test includes four mandatory exercises in two pages.
The use of non-programmable calculators is allowed.

## Exercise 1 (6 points) Image given by a converging lens

The document (Doc 1) below represents a converging lens (L), its optical axis and optical center O, the image focus F' and a luminous object (AB).

(Doc 1)

5 cm

1) Reproduce the above document (Doc 1) on a graph paper.
2) Indicate the position of the object focus $F$ of (L) and justify.
3) Find the focal length $f$ of (L).
4) Let ( $\mathrm{A}^{\prime} \mathrm{B}^{\prime}$ ) be the image of ( AB ) given by ( L ):

4-1) Construct (A'B') and provide the necessary explanations.
4-2) Specify the nature of ( $A^{\prime} \mathrm{B}^{\prime}$ ).
4-3) Find the distance $d$ between ( L ) and ( $\mathrm{A}^{\prime} \mathrm{B}^{\prime}$ ).

## Exercise 2 ( 6 points) <br> Laws of voltages and laws of currents

The circuit, shown in the document (Doc 2) below, consists of:

- A battery supplying across its terminals a constant voltage: $U_{P N}=20 \mathrm{~V}$.
- Three electric components $\mathrm{D}_{1}, \mathrm{D}_{2}$ and $\mathrm{D}_{3}$.

## 1) Calculation of voltages

1-1) Show that $U_{A C}=20 \mathrm{~V}$.
1-2) Indicating the law used, Calculate the voltage $U_{A B}$ knowing that $U_{B C}=12 \mathrm{~V}$.

## 2) Calculation of currents

Given:
$\mathrm{I}_{1}$ is the electric current carried by the electric component $\mathrm{D}_{1}$;
$\mathrm{I}_{3}$ is the electric current carried by the electric component $\mathrm{D}_{3}$.
The electric current carried by the battery is $\mathrm{I}=10 \mathrm{~mA}$.
The electric current carried by the electric component $\mathrm{D}_{2}$ is $\mathrm{I}_{2}=3 \mathrm{~mA}$.
Indicating the laws used, calculate $\mathrm{I}_{1}$ then $\mathrm{I}_{3}$.

## Exercise 3 (4 points)

## Equilibrium of a solid body

$(\mathrm{S})$ is a solid body of mass $\mathrm{m}=300 \mathrm{~g}$.
Given:
Gravitational acceleration: $g=10 \mathrm{~N} / \mathrm{kg}$;
Stiffness constant of the spring: $\mathrm{k}=2 \mathrm{~N} / \mathrm{cm}$.
The solid ( S ) is suspended from the free end of the spring as shown in the adjacent document (Doc 3). The solid (S) is in equilibrium under the action of its weight $\overrightarrow{\mathrm{W}}$ of magnitude W and another force.

1) Give the name of the other force exerted on (S).
2) Specify the vector relation between the two forces exerted on (S).
3) Calculate the value of each of these two forces.

## Exercise 4 (4 points) Archimedes upthrust

$(\mathrm{S})$ is a solid body of weight $\mathrm{W}=3 \mathrm{~N}$ and volume $\mathrm{V}=100 \mathrm{~cm}^{3}$.
Given:
Gravitational acceleration: g $=10 \mathrm{~N} / \mathrm{kg}$;
Density of water: $\rho=1000 \mathrm{~kg} / \mathrm{m}^{3}$;
The solid ( S ) is completely immersed in water.

1) Calculate the magnitude $F$ of the Archimedes upthrust exerted by the water on (S).
2) The solid ( S ) is left to itself.

2-1) Compare W to F. Deduce if (S) sinks or floats at the surface of the water.
2-2) Calculate, in this case, the magnitude $\mathrm{W}_{\text {app }}$ of the apparent weight of (S).

## Exercise 1 (6 points)

Image given by a converging lens

## Exercise 2 (6 points)

Laws of voltages and laws of currents

| Question | Answer | Mark |
| :---: | :---: | :---: |
| 1-1 | Law of uniqueness of the voltage: | 1/2 |
|  | $\mathrm{U}_{\mathrm{AC}}=\mathrm{U}_{\mathrm{PN}}=20 \mathrm{~V}$ | $3 / 4$ |
|  | Law of addition of voltages: | 1/2 |
|  | $\mathrm{U}_{\mathrm{AC}}=\mathrm{U}_{\text {AP }}+\mathrm{U}_{\text {PN }}+\mathrm{U}_{\mathrm{NC}}=0+\mathrm{U}_{\text {PN }}+0=\mathrm{U}_{\text {PN }}=20 \mathrm{~V}$ | $3 / 4$ |
| 1-2 | Law of addition of voltages: $\mathrm{U}_{\mathrm{AC}}=\mathrm{U}_{\mathrm{AB}}+\mathrm{U}_{\mathrm{BC}}$ | 1/2 |
|  | $\mathrm{U}_{\mathrm{AB}}=\mathrm{U}_{\mathrm{AC}}-\mathrm{U}_{\mathrm{BC}}$ | 1/2 |
|  | therefore $\mathrm{U}_{\mathrm{AB}}=20-12=8 \mathrm{~V}$ | $3 / 4$ |
| 2 | Law of uniqueness of the current: | 1/2 |
|  | $\mathrm{I}_{1}=\mathrm{I}_{2}=3 \mathrm{~mA}$ | $3 / 4$ |
|  | Law of addition of currents: | $1 / 2$ |
|  | $\mathrm{I}=\mathrm{I}_{1}+\mathrm{I}_{3}$ |  |
|  | $\mathrm{I}_{3}=\mathrm{I}-\mathrm{I}_{1}$ | 1/2 |
|  | therefore $\mathrm{I}_{3}=10-3=7 \mathrm{~mA}$ | $3 / 4$ |

## Exercise 3 (4 points) Equilibrium of a solid body

| Question | Answer | Mark |
| :---: | :---: | :---: |
| 1 | The tension $\overrightarrow{\mathrm{T}}$ of the spring. | 1/2 |
| 2 | (S) is in equilibrium, $\overrightarrow{\mathrm{T}}+\overrightarrow{\mathrm{W}}=\overrightarrow{0}$. | 1/2 |
| 3 | $\begin{aligned} & \mathrm{W}=\mathrm{m} \times \mathrm{g} \\ & \mathrm{~W}=0.3 \times 10=3 \mathrm{~N} \\ & \overrightarrow{\mathrm{~T}}=-\overrightarrow{\mathrm{W}} \\ & \mathrm{~T}=\mathrm{W}=3 \mathrm{~N} \\ & \hline \end{aligned}$ | $\begin{aligned} & 1 / 2 \\ & 1 / 2 \\ & 1 / 2 \end{aligned}$ |
| 4 | $\begin{aligned} & \text { Hooke's law : } \\ & \mathrm{T}=\mathrm{k} \times \Delta \mathrm{L} \\ & \Delta \mathrm{~L}=\frac{\mathrm{T}}{\mathrm{k}} \\ & \Delta \mathrm{~L}=\frac{3}{2}=1.5 \mathrm{~cm} \end{aligned}$ | $\begin{aligned} & 1 / 2 \\ & 1 / 2 \\ & 1 / 2 \end{aligned}$ |

## Exercise 4 (4 points)

Archimedes upthrust

| Question | Answer | Mark |
| :--- | :--- | :---: |
| 1 | $\mathrm{~F}=\rho \times \mathrm{V}_{\text {immersed }} \times \mathrm{g}$ | $1 / 2$ |
|  | but $\mathrm{V}_{\text {immersed }}=\mathrm{V}$ because $(\mathrm{S})$ is completely immersed in water | $1 / 2$ |
|  | therefore $\mathrm{F}=\rho \times \mathrm{V} \times \mathrm{g}$ |  |
|  | $\mathrm{F}=1000 \times 100 \times 10^{-6} \times 10=1 \mathrm{~N}$ | $1 / 2$ |
| $2-1$ | $\mathrm{~W}>\mathrm{F}$ | $1 / 2$ |
|  | therefore $(\mathrm{S})$ sinks. | $1 / 2$ |
| $2-2$ | $\mathrm{~W}_{\text {app }}=\mathrm{W}-\mathrm{F}$ |  |
|  | $\mathrm{W}_{\text {app }}=3-1=2 \mathrm{~N}$ | $1 / 2$ |
